TOXICOLOGY

Volume contents

Volume 110 (1996)

The effects of some redox-active metals and reactive aldehydes on DNA-protein cross-links in vitro
(DNA-protein crosslinks appear to be an unspecific biomarker of effect or of exposure.)
K.L. Olin, G.N. Cherr, E. Rifkin, C.L. Keen (USA) 1–8

Inhibition by lithium and rubidium of gentamicin-induced release of *N*-acetyl-*β*-D-glucosaminidase from perfused rat kidney
(A description of an interaction with a suspected mechanism.)
A.R. Dehpour, P. Ghafourifar, N. Ahangari (Iran) 9–15

Nephrotoxicity of *N*-(3-bromophenyl)-2-hydroxysuccinimide: role of halogen groups in the nephrotoxic potential of *N*-(halophenyl)succinimides
(Halogen groups are essential for nephrotoxicity.)
S.K. Hong, D.K. Anestis, N.M. Hawco, M.A. Valentovic, P.I. Brown, G.O. Rankin (USA) 17–25

The antimalarials quinacrine and chloroquine induce weak lysosomal storage of sulphated glycosaminoglycans in cell culture and in vivo
(Structures of the antimalarials influence their effect on lysosomal storage.)
R. Lüllmann-Rauch, R. Pods, B. von Witzendorff (Germany) 27–37

Formyl-methionyl-leucyl-phenylalanine and a calcium ionophore A23187 reverse the inhibition of phorbol myristate acetate-induced oxidative burst by linoleic and oleic acid anilides
(The toxic oil syndrome may be related to complex influences on the oxidative burst.)
K.M. Heiskanen, K.M. Savolainen (Finland) 39–45

Nephrotoxicity of 4-amino-2-chlorophenol and 2-amino-4-chlorophenol in the Fischer 344 rat
(Addition of a chloride group to aminophenol enhances renal toxicity.)
S.K. Hong, M.A. Valentovic, D.K. Anestis, J.G. Ball, P.I. Brown, G.O. Rankin 47–58

Urine mutagenicity and biochemical effects of the drinking water mutagen, 3-chloro-4-(dichloromethyl)-5-hydroxy-2[5*H*]-furanone (MX), following repeated oral administration to mice and rats
(Evidence is presented to suggest that MX is efficiently detoxified in vivo.)
J.R. Meier, S. Monarca, K.S. Patterson, M. Villarini, F.B. Daniel, M. Moretti, R. Pasquini (USA, Italy) 59–70

Age dependence of the cardiac lesions induced by minoxidil in the rat
Cardia lesions are more frequent and severe in older rats.)
E.H. Herman, J. Zhang, D.P. Chadwick, V.J. Ferrans (USA) 71–83

Ortho-phenanthroline modulates enzymes of cellular energy metabolism
(Besides its iron chelating antioxidative property ortho-phenanthroline has inhibitory and activating effects on enzymes.)
E. Gerber, A. Bredy, R. Kahl (Germany) 85–93

Amiodarone-induced pulmonary fibrosis in Fischer 344 rats
(Intratracheal instillation provides a suitable model to study amiodarone toxicity.)
P.G. Reinhart, Y.-L. Lai, C.G. Gairola (USA) 95–101

Haloacetate-induced oxidative damage to DNA in the liver of male B6C3F1 mice
(Oxidative DNA damage may be more important in the chronic toxicity of brominated haloacetates than of chlorinated ones.)
J.M. Parrish, E.W. Austin, D.K. Stevens, D.H. Kinder, R.J. Bull (USA) 103–111

Reversal of acute theophylline toxicity by calcium channel blockers in dogs and rats
(Calcium may play an important role in drug induced cell death.)
V.E. Whitehurst, X. Joseph, J.A. Vick, F.R. Alleva, J. Zhang, T. Balazs (USA) 113–121
Comparative effects of the metabolic inhibitors 2,4-dinitrophenol and iodoacetate on mouse neuroblastoma cells in vitro
(Both compounds inhibit cell proliferation but differ in their effects on biochemical parameters.)
M.I. Andrés, G. Repetto, P. Sanz, M. Repetto (Spain) 123–132

Immunotoxicology
Alterations of dendritic cells in the rat thymus without epithelial cell loss during cyclosporine treatment and recovery
(Dendritic cells disappear from the rat thymic medulla after cyclosporin treatment.)
E.J. De Waal, L.H.P.M. Rademakers, H.-J. Schuurman, J.G. Vos, H.V. Loveren (The Netherlands; Switzerland). 133–151
Role of Fas apoptosis and MHC genes in 2,3,7,8-tetrachlorodibenzo-*p*-dioxin (TCDD)-induced immunotoxicity of T cells
(Although the Ah locus plays the primary role in determining the toxicity of TCDD on the T cells, TCDD may also induce toxicity in T cells by triggering apoptosis.)
M.J. Rhile, M. Nagarkatti, P.S. Nagarkatti (USA) 153–167
